

Managed LAN & WiFi

Allowing a professional organisation such as EXPO.e to manage your customers' LAN and WiFi means they are placing their IT infrastructure in safe hands. With a wealth of experience in managed Network solutions and a 24 / 7 x 365 UK support desk, we are highly skilled and available round the clock to keep their business running.

WHY CHOOSE A MANAGED LAN & WIFI SERVICE WITH EXPO.E?

Allowing us to design, deploy and manage your customers' LAN and WiFi means that we can work proactively; fixing faults and ensuring that their Network is always running at full capacity and as smoothly as possible.

Passing this over to us means that your customers' IT team can focus on developing front-end applications and improving their processes. It also decreases the need for additional recruitment in order to support their team, which in turn decreases business costs.

This is what we are experts at - wouldn't you want your customers' infrastructure maintained by the very best?

Streamline your customers' internal IT resources, reduce the risk of failures affecting your customers and allow EXPO.e to take the reins.

WHY WORK WITH EXPO.E?

EXPO.e is a trusted provider of Connectivity, Cloud, Voice and IT Managed services. By seamlessly integrating these into our VPLS enabled 100GigE carrier Network our customers can easily converge multiple services over a single Private Network Connection. As the first European company to launch VPLS (in 2006) our Network makes it possible to extend the LAN from your customers' existing IT systems into the Cloud, staying safe and secure behind the firewall. This means the entire ecosystem of EXPO.e and its partners can be accessed from within the existing LAN – free of the security risks and exposure from the Internet.

Every year we continue to make significant investments into the fundamentals of our success – technology and people. And by working with world class partners who share in our vision we will achieve our mission to be the most advanced and innovative business technology enabler and partner in Europe – and to help our partners' customers increase revenues, retain customers and win more business.

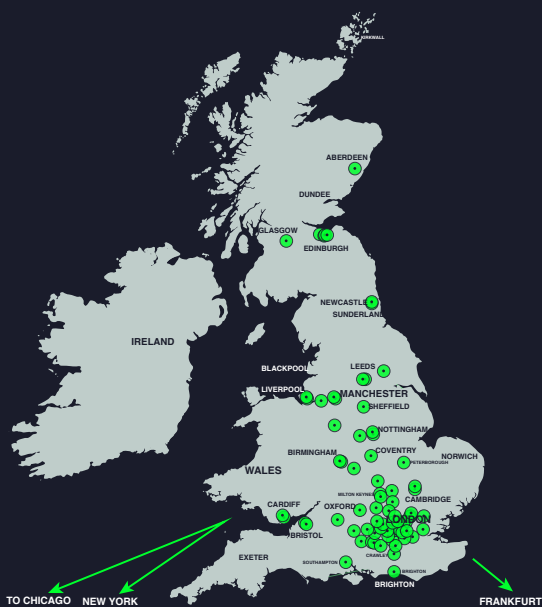

MANAGED LAN & WIFI FEATURES
